1.2. Pie Chart of Vote Share by Candidate

2022 Kitui Governor: Vote Share

Julius Makau Malombe received 60.3% of the county vote

Source: IEBC Form 37C | Kitui County

1.3. Outcome

The aggregated polling station data reveals the following county-wide results for the 2022 Kitui Gubernatorial Election:

- **Julius Makau Malombe** emerged as the clear winner with **198,004 votes**, representing **60.3%** of all valid votes cast — a commanding majority that left little room for competition.
- **David Musila** came in second with **117,606 votes (35.8%)**, making him the only candidate who posed a genuine challenge to Malombe, though still falling short by over 80,000 votes.
- **Jonathan Mwangangi Mueke** finished a distant third with only **10,639 votes**, accounting for a mere **3.24%** of the total valid votes. This performance confirms that Mueke had no significant geographic stronghold and struggled to mobilize voters across all constituencies.
- **Charity Kaluki Ngilu** received the fewest votes at **2,026 (0.62%)**, effectively a non-factor in the race.

Victoria Plaza 8th floor, 11 Parklands Road

Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i l P ARPUS LIMITED

1.4. Key Observations:

- The total valid votes cast were **328,126**
- Malombe's margin over Mueke was **187,365 votes** — a gap of **57 percentage points**
- For Mueke to be competitive in 2027, he would need to grow his vote share from **3.24% to at least 30–35%**, requiring roughly a **10x increase** in votes
- The Malombe-Musila combined vote share of **96.1%** left only **3.9%** for the remaining candidates, indicating a highly consolidated two-horse race

2.3 Heatmap of Mueke Vote Share by Constituency

2.4 Stacked Bar Chart: Vote Composition per Constituency

Candidate Votes by Constituency — 2022 Kitui Governor

Grouped bars show relative performance across all six constituencies

2.5 Outcome

This report presents the aggregated electoral results across all eight constituencies in Kitui County. The data reveals a deeply uneven performance landscape for Jonathan Mueke.

- **Kitui Central** recorded the highest Mueke vote share at **5.13%** (2,370 votes), making it his strongest constituency — yet even here he finished a distant third. **Kitui East** followed with **4.52%** (1,911 votes), and **Kitui Rural** with **4.07%** (1,332 votes). His weakest performances were in the Mwingi sub-region, particularly **Mwingi West (1.97%)**, **Mwingi Central (2.09%)**, and **Mwingi North (2.22%)** — all falling below 3%.

2.6 Key Observations

- A critical observation is that even in his best constituency, Mueke's vote share never exceeded **5.13%**, confirming that he had no dominant stronghold anywhere in the

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya

f d i in X PARPUS LIMITED

county. Malombe swept all Kitui-side constituencies with vote shares exceeding 60%, while Musila dominated the Mwingi sub-region, particularly **Mwingi West (26,876 votes)** and **Mwingi Central (20,409 votes)**.

2.7 Strategic Implications for 2027

The constituency data presents both a challenge and an opportunity for Mueke's 2027 ambitions:

- **The Kitui bloc** (Central, East, Rural, South, West) is currently dominated by Malombe. Mueke would need to either unseat Malombe's support here or wait for Malombe's incumbency advantage to weaken.
- **The Mwingi bloc** (North, Central, West) is Musila's territory. However, Mwingi North — the most competitive constituency in 2022 — represents the best opportunity for Mueke to build a coalition with either Malombe or Musila supporters.
- **A realistic 2027 path** for Mueke would require consolidating support in the Kitui sub-region where he performed best, while negotiating a coalition arrangement in the Mwingi sub-region to avoid splitting votes with Musila.

Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i in X PARPUS LIMITED

3.3 Strategic Implications

The contrast between the top and bottom stations delivers a clear strategic message for 2027:

Dimension	Finding
Best region	Kitui East and Kitui South
Worst region	Mwingi North
Best single station	Nzaini Primary, Kitui South (29.69%)
Stations with zero votes	At least 10 in Mwingi North alone
2027 priority zones	Kitui East, Kitui Rural, Kitui Central
Zones requiring coalition strategy	All Mwingi constituencies

Mueke's 2027 campaign must **consolidate and expand** the Kitui sub-region where pockets of genuine support already exist, while relying on **coalition deals rather than direct campaigning** in the Mwingi sub-region where he currently has zero footprint.

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i l P PARPUS LIMITED

4.0 Mueke's Performance Gap vs Winner

4.1 Outcome

- **Kitui Central and Kitui East** Both panels show the density spike sitting very close to zero but still on the negative side. This is consistent with the earlier finding that these are Mueke's strongest constituencies — while he still lost most stations, the gap was smaller here than anywhere else. The distribution is narrow, meaning the deficit was relatively consistent and not wildly variable across stations.
- **Kitui Rural and Kitui South** Similar patterns to Kitui Central and East — the density is clustered near zero with a slight negative lean. Kitui South is notable because it contains Mueke's single best polling station (Nzaini Primary at 29.69%), which explains why the tail of the distribution reaches closest to zero in this panel.
- **Kitui West** The density spike here shows a slightly wider spread toward negative values compared to the Kitui East and Central panels, reflecting Malombe's stronger dominance in this constituency (62.1% vote share) and Mueke's correspondingly larger deficit at most stations.
- **Mwingi Central and Mwingi West** These two panels show the most extreme negative gaps in the entire dataset. The distribution tails stretch furthest to the left — toward -20,000 and beyond — reflecting Musila's overwhelming dominance in this region. At stations where Musila received 20,000+ votes, Mueke's gap was massive. The density spike is extremely sharp and narrow near zero, meaning nearly all stations show a near-total wipeout for Mueke.

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i in X PARPUS LIMITED

- **Mwingi North** This panel is the most analytically interesting. While still predominantly negative, the distribution shows a slightly more diffuse spread compared to Mwingi Central and West. This reflects the competitive nature of Mwingi North — where Malombe and Musila were closely matched — leaving fractionally more room for minor candidates. However, Mueke still failed to capitalize, with the gap remaining firmly negative throughout.

4.2 Key Observations

- The gap analysis confirms what the vote share data suggested — **Mueke did not win a single competitive polling station in any meaningful pattern.** The rare stations where he approached competitiveness were isolated micro-pockets in Kitui East and Kitui South rather than a systematic geographic base.
- For 2027, the gap analysis reveals that **Mueke's most realistic growth strategy is not to attack Musila in Mwingi or challenge Malombe's core Kitui base, but rather to target the narrow-gap stations in Kitui East, Kitui Central, and Kitui Rural** — the constituencies where the density distributions sit closest to zero — and convert those near-competitive stations into actual wins through intensified ground campaigns, community presence, and leveraging his PS for Livestock role to deliver visible development impact.

f d i in X PARPUS LIMITED

5.0 Random Forest Variable Importance

5.1 Outcome

The Random Forest model delivers one overriding strategic message: **Mueke's 2027 electability is almost entirely dependent on what Musila and Malombe do.** He currently has no sufficiently independent voter base to win on his own. His path to competitiveness runs through **negotiating a coalition with Musila, consolidating Kitui Rural and Kitui South as his home base, and using his PS for Livestock role to build brand visibility in the stations where the model shows he has the most room to grow.**

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i X PARPUS LIMITED

5.1 Muekes Electability Scenerios-Analysis

The scenario chart projects Jonathan Mueke's potential vote share in the 2027 Kitui gubernatorial election under three different growth assumptions, benchmarked against three critical electoral thresholds represented by the dashed reference lines.

5.2 The Three Threshold Lines

- **Green dashed line (10%)** — the Coalition Threshold. Below this, a candidate has no bargaining power in coalition negotiations
- **Orange dashed line (20%)** — the Serious Contender mark. A candidate at this level is genuinely threatening to the frontrunner
- **Red dashed line (30%)** — the Competitive Race threshold. A candidate here has a realistic chance of winning

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i l P PARPUS LIMITED

5.2.1 Scenario A — Low Growth (4.9%)

Under low growth assumptions — where Mueke only modestly improves on his 2022 performance — his projected vote share reaches **4.9%**. This bar sits **below all three threshold lines**, meaning:

- He remains **non-competitive**
- He has **no coalition bargaining power**
- He cannot influence the outcome of the election
- This scenario occurs if he runs without a strong ground campaign, no coalition support, and limited visibility from his PS role

This is essentially a repeat of 2022 with marginal improvement — the worst case outcome for his political ambitions.

5.2.2 Scenario B — Medium Growth (8.1%)

Under medium growth — where Mueke runs a more organized campaign with moderate coalition support and some visibility from his national government role — his projected vote share reaches **8.1%**. This bar:

- Is still **below the 10% coalition threshold** (green line)
- Represents meaningful improvement from 3.24% in 2022
- But still leaves him **outside meaningful political influence**
- This scenario occurs if he builds some grassroots presence but fails to secure a formal coalition deal with Musila or any other major political player

While better than 2022, Scenario B is still insufficient for Mueke to matter in the 2027 race.

5.2.3 Scenario C — High Growth (13%)

Under high growth assumptions — a full coalition strategy, maximum leverage from the PS role, aggressive ground campaigning in Kitui East, Kitui Rural and Kitui South, plus voter mobilization in previously zero-vote Mwingi stations — his projected vote share reaches **13%**. This bar:

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i X PARPUS LIMITED

- **Crosses the 10% coalition threshold** (green dashed line)
- Places him in a position of **real political relevance**
- Makes him a **kingmaker** — his votes could determine whether Malombe or Musila wins
- However it still falls well **short of the 20% serious contender line** and far below the **30% competitive race line**
- This is the most optimistic realistic scenario based on 2022 data

5.3 Critical Finding

Even under the most optimistic high growth scenario, Mueke reaches only **13%** — less than half of what would be needed to be a serious contender at 20%, and less than half of the competitive race threshold at 30%. This is the most important finding of the entire report because it directly answers the central question of the training plan:

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i in X PARPUS LIMITED

6.0 JONATHAN MUEKE 2027 GUBERNATORIAL STRATEGY — DATA-DRIVEN ADVISORY REPORT

6.1 The Honest Reality First

In 2022 Mueke received **only 3.24% of the county vote (10,639 votes)** finishing third in all eight constituencies without winning a single competitive polling station cluster. Even the most optimistic scenario projects only **13% in 2027** — far below the 30% needed to win. Therefore the question is not simply "*what must he do to win*" but more precisely "**what must he do between now and 2027 to make winning mathematically possible.**"

6.2 COALITION STRATEGY — the most critical factor

The Random Forest model gave Musila's vote share a perfect importance score of **100** — the single strongest predictor of Mueke's competitiveness. This means one thing above everything else:

Mueke cannot win without Musila.

In 2022 Musila received **117,606 votes (35.8%)** — more than ten times Mueke's total. If Mueke and Musila ran on a joint ticket in 2027 their combined 2022 votes would have been **128,245** — still short of Malombe's **198,004** but enough to make it a genuine two-horse race.

What he must do:

- Begin coalition negotiations with Musila's camp
- Position himself as Musila's running mate or secure Musila's public endorsement for a Mueke gubernatorial bid
- Identify and court the political brokers, clan elders and church leaders who delivered Musila's Mwingi votes.
- Under no circumstances should he run as a lone candidate in 2027 — the data shows this leads only to Scenario A at 4.9%

6.3 GEOGRAPHIC TARGETING — Focus Where the Data Says He Can Win

The constituency analysis, heatmap, gap analysis and Random Forest model all point to the same priority zones:

Victoria Plaza 8th floor, 11 Parklands Road
P. O. Box 772-00606-Sarit Centre,
Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i in X PARPUS LIMITED

Priority Tier 1 — Must Win

- **Kitui East** — his best constituency at 4.52%, contains 6 of his top 10 polling stations, and the Random Forest identified it as a meaningful predictor
- **Kitui Rural** — 4.07% share, appeared in top 10 stations, scored 17.8 importance in the model
- **Kitui South** — contains his single best polling station (Nzaini Primary at 29.69%), scored 12.7 importance

Priority Tier 2 — Must Grow

- **Kitui Central** — his highest constituency share at 5.13%, urban voters more familiar with his profile

Priority Tier 3 — Coalition Dependent

- **Mwingi North, Mwingi Central, Mwingi West** — do not campaign here independently. These are Musila's territory. Secure them through the coalition deal, not through direct campaigning

What he must do:

- Open campaign offices in every ward in Kitui East, Kitui Rural and Kitui South by mid-2026
- Identify the specific polling stations in these constituencies where he got 20%+ in 2022 and build agent networks around them
- Run community projects, harambees and development initiatives specifically in Tier 1 constituencies.

Victoria Plaza 8th floor, 11 Parklands Road

Westlands, Nairobi, Kenya
+254 737 666 770
info@parpus.com www.parpus.com
f d i l P PARPUS LIMITED

6.4 LEVERAGE THE PS FOR LIVESTOCK ROLE — Convert Government Position into Political Capital

Mueke currently serves as **Principal Secretary for Livestock** — a nationally appointed position that gives him access to government resources, visibility and credibility that most gubernatorial candidates do not have. The data shows the livestock sector is critical in Kitui County which is predominantly arid and semi-arid with large pastoralist communities.

What he must do:

- Ensure every livestock development project, veterinary outreach, drought relief program and farmer subsidy delivered in Kitui County is **visibly associated with his name and office**
- Hold public barazas in Kitui East, Kitui Rural and Kitui South specifically to announce livestock programs
- Build relationships with livestock farmer groups, pastoralist communities and agricultural cooperatives — the training plan identified these as key voter blocs
- Commission boreholes, livestock markets and veterinary centres in his target constituencies and attend the openings personally
- Use national media appearances in his PS role to keep his name in public discourse in Kitui
- The goal is simple: **every Kitui farmer who benefits from a government livestock program must know Jonathan Mueke made it happen**

6.5 VOTER EDUCATION IN HIGH REJECTION CONSTITUENCIES — Turn Wasted Votes into Mueke Votes

The rejection rate analysis showed **Mwingi Central at 1.9%** and **Kitui West at 1.31%** have the highest ballot spoilage rates. These represent voters who showed up but could not successfully cast a valid ballot.

What he must do:

- Partner with civil society organizations and churches to run voter education programs in high rejection constituencies
- Frame this as a civic responsibility campaign — not an overtly political one
- This builds goodwill, name recognition and community trust simultaneously

- Convert previously wasted ballots into valid Mueke votes in 2027

6.6. YOUTH AND WOMEN VOTER MOBILIZATION

The training plan identifies youth voters, women voters and boda boda operators as key under-engaged voter blocs in Kitui County.

What he must do:

- Register as a patron of at least one major youth organization in each of his Tier 1 constituencies before end of 2025
- Support women's chama groups and table banking initiatives in Kitui East and Kitui Rural
- Sponsor boda boda training, licensing and SACCO formation — this bloc is large, organized and politically influential
- Use social media — particularly TikTok, Facebook and WhatsApp — to reach youth voters who did not vote in 2022
- Host annual youth forums branded under his name in Kitui County

6.7 CHURCH AND COMMUNITY NETWORKS — The Invisible Political Infrastructure

In Kitui County, churches, clan structures and chief barazas are more politically influential than formal party structures. The training plan specifically identified these as key local political structures.

What he must do:

- Identify the five most influential church denominations in each of his Tier 1 constituencies and build personal relationships with their leadership
- Attend funerals, weddings, fundraisers and harambees consistently throughout 2025 and 2026
- Work through clan elders and sub-location chiefs to build grassroots legitimacy
- Be physically present in the county every weekend — not just during campaign season
- The Mwingi zero-vote stations show what happens when a candidate has zero community penetration. The antidote is **consistent physical presence over years, not months**

- **"The Development PS who came home"** — leveraging his national government experience to promise delivery-focused governance
- Center messaging on **water, livestock, roads and youth employment** — the issues most identified as resonating with Kitui voters
- Contrast himself with career politicians by emphasizing his technocratic competence and national government connections
- Avoid negative campaigning against Malombe or Musila — the data shows he needs both their voter bases
